National Toxicology Program

NTP Mission: *to evaluate agents of public health concern by developing and applying tools of modern toxicology and molecular biology.*

NTP Vision for the 21st Century: *to move toxicology from a predominantly observational science at the level of disease-specific models to a predominantly predictive science focused upon a broad inclusion of target-specific, mechanism-based, biological observations*

Priority Areas in Environmental Health Sciences

- Low Dose
- Windows of Exposure
- Toxicology Screening
- Mixtures
- Clinical Research
- Emerging Hazards
- Human Health Effects of Climate Change
- Green Chemistry

Next Steps

- **New Permanent Staff**
 - Scientific Director
 - Director of Extramural Research & Training
 - Deputy Director
 - Toxicologist
- **Strategic Plan for 2012-2016**
- **Reframing our work**
 - “My work helps us understand how the environment can impact public health because...”

Toxicology Resources on Petroleum

The NTP has compiled these environmental health and toxicology resources on petroleum and constituents to facilitate information exchange among members of the Interagency Oil Spill Human Health Monitoring & Research Workgroup.

NIEHS & NTP Oil Spill Activities

NIEHS & NTP Oil Spill Activities

NIEHS Proposed Oil Spill Research

NTP: Toxicological studies to identify important biological and tissue targets for crude oil fractions as are appearing in the gulf.

DIR: A cohort study to assess the short-and long-term health effects of exposure to oil spill.

DETR: A comprehensive research portfolio including monitoring, exposure assessment, risk assessment, communication, and outreach.

ACTIVITY

Assessing the Human Health Effects of the Gulf of Mexico Oil Spill

6/17/2010

Decades later, we still can feel the consequences of the Exxon Valdez oil spill. How will the even larger crisis in the Gulf impact our health? The IOM will hold a meeting June 22-23 to discuss the health issues for those living and working near the Gulf.
